CORP

The Fusion of Experience and Technology

Data Protection Solutions and Management Services

In a world of rapidly evolving technology, where over 90% of all documents are now created in an electronic format, iDOC Corp's eDiscovery suite of data management and recovery tools give your legal or corporate business peace of mind. Rest easy knowing you have immediate access to your documents in user-friendly formats, ready for instant presentation.

Undoubtedly, your company is not exempt from this trend. Organizing your expanding universe of data – from word processing, spreadsheets, PDFs, email and image files, to mention just a few - is no small task, and we at iDOC Corp know it. That is why we encourage you to peruse our proprietary eDiscovery services, which constitute the outcome of our more than 15 years of experience in the business of legal and corporate document processing, digitizing, retrieving, reviewing and organizing.

• **eDiscovery and data protection solutions**

eDiscovery is a collection of tools and methodologies to ensure that your digitized documents are suitable for immediate presentation at any given time. It enables us to collect, process, review, scrutinize and organize your electronic data, converting it into user-friendly formats for quick access. iDOC Corp accomplishes this by de-duplicating documents to avoid redundancy, and by converting files to TIFF documents that can be further organized, managed and viewed using common desktop tools and applications.

• **Experts on Computer forensics**

Computer forensics, which is a branch of forensic science related to retrieving data found in computers and digital storage mediums - usually for legal purposes - is one of iDOC Corp's areas of expertise, utilizing state-of-the-art investigative techniques and sophisticated software programs to recover vital information that was lost, either accidentally or intentionally.
